

FR200

High-Output, Two-Way, Constant-Directivity Speaker System

- High output—low profile (only 9 inches deep)
- 100-dB sensitivity
- 300 watts long-term power capacity
- Smooth, extended response
- Easy suspension
- OmniMount® Series 100 mounting system compatible¹
- Oak finish to blend into surroundings
- Pro™ circuit solid-state protection
- TK60 line transformer kit available

SPECIFICATIONS

Axial Frequency Response (swept sine wave, 4 volts at 10 feet on axis, anechoic environment with optional APX-200 active equalizer, normalized for 1 watt/1 meter; see Figure 1):

50-18,000 Hz

Low-Frequency 3-dB-Down Point:

80 Hz

Usable Low-Frequency Limit

(10-dB-down point):

40 Hz

Half-Space Reference Efficiency:

5.9%

Long-Term Average Power-Handling Capacity (per ANSI/EIA RS-426-A 1980; see Power-Handling Capacity section):

300 watts

Maximum Woofer Acoustic Output:

17.7 watts

Sensitivity (SPL at 1 m, 1 W into nominal impedance, anechoic environment, band-limited pink-noise signal, 100-15,000 Hz):

100 dB

Beamwidth (angle included by 6-dB-down points on polar responses, horizontal and vertical planes, indicated one-third-octave bands of pink noise; see Figure 4),

250-500 Hz:

150° ±30°

500-18,000 Hz:

100° ±20°

10,000-18,000 Hz:

60° ±12°

Directivity Factor R_0 (Q), 800- to 16,000-Hz Median (see Figure 5):

10 (+12.5, -4.5)

Directivity Index D_0 , 800- to 16,000-Hz Median (see Figure 5):

10 dB (+3.5 dB, -2.5 dB)

Phase Variation, 300-3,000 Hz:

±30°

Distortion, 10% Full Power Input (see Figure 6),

Second Harmonic,

100 Hz: 3%

1,000 Hz: 1.5%

10,000 Hz: 3%

Third Harmonic,

100 Hz: 3%

1,000 Hz: 1.5%

10,000 Hz: 0.5%

Distortion, 1% Full Power Input

Second Harmonic,

100 Hz: 1%

1,000 Hz: 1%

10,000 Hz: 1%

Third Harmonic,

100 Hz: 3%

1,000 Hz: 1.5%

10,000 Hz: 0.1%

Transducer Complement:

EVM®12S Pro-Line 12-inch woofer;
1½-inch Super-Dome™ tweeter coupled to 9-inch Direktor™

Box Tuning Frequency:

48 Hz

Crossover Frequency:

2,000 Hz

Crossover Slope:

12 dB per octave

Impedance,

Nominal:

8 ohms

Minimum:

6.5 ohms

Input Connections:

Screw terminals (#8-32) on barrier strip

Enclosure Materials and Colors:

Oak grain, vinyl-clad enclosure constructed of ProWood™ and particle board

Grille:

Tan cloth

Suspension (see Suspending the FR200 section):

WCB-1 universal hanging bracket

WCB-2 cinema wall bracket

OmniMount® Series 100 support system¹

Optional Accessories:

WCB-1 universal hanging bracket

WCB-2 cinema wall bracket

TK60 line transformer kit

APX200 active equalizer

Dimensions,

Height:

64.8 cm (25.50 in.)

Width:

41.9 cm (16.50 in.)

Depth:

22.2 cm (8.75 in.)

Net Weight:

23.1 kg (51 lb)

Shipping Weight:

24.0 kg (53 lb)

DESCRIPTION

The Electro-Voice FR200 is a compact, two-way, high-efficiency, constant-directivity speaker system. The system can be used for general sound reinforcement in churches and small auditoriums. High-quality, professional-level components are used throughout the design, including a 100° x 100° Direktor™ horn coupled to a Super-Dome™ high-frequency driver and a professional-grade 12-inch woofer. The oak-grain vinyl has been selected to blend into most interior design concepts and is complemented with a removable tan cloth grille.

¹ OmniMount® is a registered trademark of OmniMount Systems.

FR200 SPECIFICATION GRAPHICS

FIGURE 8 — Mounting the FR200B Using the WCB-1 Bracket

FIGURE 9 — Mounting the FR200B Using the WCB-2 Bracket

A second-order (12-dB-per-octave) crossover at 2,000 Hz is used to separate the two frequency sections and provide equalization for the Super-Dome™ and the Direktor™ horn. The bass section was designed for efficient low-end performance in a compact enclosure. The APX-200 equalizer can provide a nominally "flat" response on axis (see Equalization section).

CONSTANT-DIRECTIVITY SPEAKER SYSTEM

The crossover frequency and speaker component geometries have been carefully selected so that the directional characteristics of the woofer and Direktor™ match at the crossover frequency (approximately 100 degrees circular coverage patterns for each) to create a special system type—the constant-directivity system. At higher frequencies, the horizontal and vertical coverage pattern remains essentially constant. Response within the 100° x 100° rated coverage angle is uniform, which means dependable audience coverage without "hot spots" or dead zones at certain frequencies. The 100° x 100° dispersion characteristic permits this small system to be used horizontally or vertically to aesthetically best suit the environment in which it is placed without changing the coverage angles. The controlled directivity of the high- and low-frequency transducers also eliminates response irregularities caused by diffraction off enclosure edges and, in combination with an essentially flat on-axis frequency response, produces a total acoustic power output that is uniform with frequency.

FREQUENCY RESPONSE

The FR200 axial frequency response was measured in Electro-Voice's large anechoic chamber at a distance of 10 feet with a swept sine-wave input. Figure 1 shows the FR200 with the APX-200 active equalizer in place. Figure 2

shows the FR200's response without equalization. Both figures were normalized for 1 watt at 1 meter.

EQUALIZATION

The FR200 can be "equalized" in different ways:

1. No external equalization. Ideal for high-level, high-quality voice reinforcement where extended bass response is not a requirement.
2. With APX-200 active equalizer (see Figure 1). Suitable for full-range applications with a very flat frequency response from 50-18,000 Hz. The APX-200 is a plug-in module that works with EV 7000 and AP series dual-channel power amplifiers. APX-200 frequency response is shown in Figure 7.
3. Outboard one-third-octave equalization. Do not boost response below 45 Hz. The woofer will run into excursion limiting. (The response of Figure 7 is a good equalization guide.)

DIRECTIVITY

The directional characteristics of the FR200 were measured in Electro-Voice's large anechoic chamber. The test signal was one-third-octave filtered pink noise at the frequencies indicated. A full spherical measurement system was used, which is compatible with the AcoustaCADD™ computer-aided design program. All directional information was measured at 20 feet.

Figure 3 illustrates the horizontal and vertical polar responses.

Figure 4 shows the horizontal and vertical beamwidths. Beamwidth is the angle at which the horizontal and vertical polar responses have decreased in level by 6 dB when compared with the axial frequency response.

Figure 5 illustrates the total directivity of the FR200. The directivity factor $D_1(Q)$ is the relative value, at a point, of the FR200 when compared to an ideal spherical response. The directivity index, D_1 , is calculated by $D_1 = 10 \log_{10} R$.

POWER-HANDLING CAPACITY

To our knowledge Electro-Voice was the first U.S. manufacturer to develop and publish a power test closely related to real-life conditions. A random-noise input signal is used because it contains many frequencies simultaneously, just like real voice or instrument program. The signal contains more energy at extremely high and low frequencies than typical actual program, adding an extra margin of reliability. The test combines not only the overall "long-term average" or "continuous" level—which our ears interpret as loudness—but also short-duration peaks which are many times higher than average, just like actual program. The long-term average level stresses the speaker thermally (heat). The instantaneous peaks test mechanical reliability (cone excursion). Note that the sine-wave test signals sometimes used have a much less demanding peak value relative to their average level. In actual use, long-term average levels exist from several seconds on up, but we apply the long-term average for several hours, adding another extra measure of reliability.

Specifically, the FR200 is designed to withstand the power test described in ANSI/EIA RS-426-A 1980. The EIA test spectrum is applied for eight hours. The spectrum is obtained by filtering white noise (a particular type of random noise with equal energy per bandwidth). The filter applies a 6-dB-per-octave roll-off below 40 Hz and above 318 Hz. When measured with a one-third-octave constant-percentage analyzer, this filter produces a spec-

trum whose 3-dB-down points are at 100 Hz and 1,200 Hz with a 3-dB-per octave slope above 1,200 Hz. This shaped signal is fed to the power amplifier with the continuous power set to provide 300 watts into the 6.0-ohm EIA equivalent impedance (42.4 volts rms).

Amplifier clipping sets instantaneous peaks at 6 dB above the continuous power or 1,200 watts peak (84.9 volts peak). This procedure provides a rigorous test of both thermal and mechanical failure modes.

TWEETER PROTECTION

Because of the extremely high power handling of the FR200, the crossover has incorporated into it an automatically resetting solid-state tweeter-protection device. This design permits short-term transients to pass but gently pads the tweeter from long-term power extremes that would normally destroy the tweeter.

LINE TRANSFORMER KIT

The TK60 (25/70.7-volt) line transformer kit is an option available for high-impedance systems, generally desired in multi-speaker distributed designs and some smaller systems where long speaker-wire runs are necessary. The TK60 consists of an Electro-Voice TM60 transformer mounted on an input panel that is substituted for the direct (8 ohms) input panel supplied with the system. The TK60 allows direct input to the system or access to any of the seven transformer taps covering 7.5, 15, 30 and 60 watts at 25 and 70.7 volts. Connections are made on barrier strips with #8-32 screws. Note: the full potential of the FR200 will not be realized because the TK60 is only rated for 60 watts.

SUSPENDING THE FR200

The FR200 is fitted with a number of 1/4-20 threaded inserts and can be suspended in several ways:

1. WCB-2 is a U-bracket designed specifically for the FR200 when being used in a cinema installation. It supports the FR200 vertically and can be locked at an angle of 15° (see Figure 9).
2. WCB-1 is a universal U-bracket designed to allow the suspension of the FR200 system at any angle and any orientation from the wall or ceiling (see Figure 8).
3. OmniMount® Series 100 support system. Four 1/4-20 threaded inserts are located in the rear panel to allow the use of the OmniMount® Series 100 support system. A

safety chain should be used to ensure safe operation. (Obtain OmniMount® specifications for full instructions.)

It is the responsibility of the installer to ensure the integrity of the mounting surface. The grille of the FR200 is securely attached on the front of the cabinet with four screws.

ARCHITECTS' AND ENGINEERS' SPECIFICATIONS

The loudspeaker system shall be a two-way, full-range design consisting of an EVM®12S Pro-Line 12-inch woofer, a 1 1/2-inch Super-Dome™ tweeter coupled to a 9-inch, 100° x 100° Direktor™ constant-directivity horn, and a passive crossover network installed in a ProWood™/particle-board enclosure with a tan cloth grille. Finish shall be oak grain vinyl.

The system shall have a crossover point of 2,000 Hz and have a nominal impedance of 8 ohms. Usable frequency range shall extend from 80 Hz to 18,000 Hz. Sensitivity shall be at least 100 dB for a 1 watt input at a distance of 1 meter on axis. Long-term power capacity shall be at least 300 watts, based on ANSI/EIA RS-426-A 1980 for full-range loudspeaker systems.

Input connections shall be #8-32 screw terminals on a barrier strip. Suspension of the system shall be achieved through the use of the WCB-2 U-bracket (for vertical suspension at 15°), the WCB-1 U-bracket (for suspension at any angle or orientation), or the OmniMount® Series 100 support system; four 1/4-20 threaded inserts shall be located in the rear panel of the speaker enclosure to accommodate the OmniMount hardware.

Overall dimensions shall be no greater than 64.8 cm (25.50 in.) high by 41.9 cm (16.50 in.) wide by 22.2 cm (8.75 in.) deep. Net weight shall be 23.1 kg (51 lb). The system shall be the Electro-Voice FR200.

UNIFORM LIMITED WARRANTY

Electro-Voice products are guaranteed against malfunction due to defects in materials or workmanship for a specified period, as noted in the individual product-line statement(s) below, or in the individual product data sheet or owner's manual, beginning with the date of original purchase. If such malfunction occurs during the specified period, the product will be repaired or replaced (at our option) without charge. The product will be returned to the customer pre-

paid. **Exclusions and Limitations:** The Limited Warranty does not apply to: (a) exterior finish or appearance; (b) certain specific items described in the individual product-line statement(s) below, or in the individual product data sheet or owner's manual; (c) malfunction resulting from use or operation of the product other than as specified in the product data sheet or owner's manual; (d) malfunction resulting from misuse or abuse of the product; or (e) malfunction occurring at any time after repairs have been made to the product by anyone other than Electro-Voice or any of its authorized service representatives. **Obtaining Warranty Service:** To obtain warranty service, a customer must deliver the product, prepaid, to Electro-Voice or any of its authorized service representatives together with proof of purchase of the product in the form of a bill of sale or receipted invoice. A list of authorized service representatives is available from Electro-Voice at 600 Cecil Street, Buchanan, MI 49107 (616/695-6831 or 800/234-6831). **Incidental and Consequential Damages Excluded:** Product repair or replacement and return to the customer are the only remedies provided to the customer. Electro-Voice shall not be liable for any incidental or consequential damages including, without limitation, injury to persons or property or loss of use. Some states do not allow the exclusion or limitation of incidental or consequential damages so the above limitation or exclusion may not apply to you. **Other Rights:** This warranty gives you specific legal rights, and you may also have other rights which vary from state to state.

Electro-Voice Speakers and Speaker Systems are guaranteed against malfunction due to defects in materials or workmanship for a period of five (5) years from the date of original purchase. The Limited Warranty does not apply to burned voice coils or malfunctions such as cone and/or coil damage resulting from improperly designed enclosures. Electro-Voice active electronics associated with the speaker systems are guaranteed for three (3) years from the date of original purchase. Additional details are included in the Uniform Limited Warranty statement.

Service and repair address for this product: Electro-Voice, Inc., 600 Cecil Street, Buchanan, Michigan 49107 (616/695-6831 or 800/234-6831).
